AdvancedLive 7.0
Even easier device placement on maps

What's new in release 7.0?

If you use maps in AdvancedLive, we've made it simpler to alter the location of previously plotted devices on your building plans. You can now drag existing devices to the correct location in the room, floor or building, keeping AdvancedLive in sync with any fire system changes on your site.

As with all AdvancedLive functionality, you set the permissions for who can do what, so you remain in full control of your system and site.

Release 7.0 brings you other benefits too:

You can now access AdvancedLive via Microsoft and LinkedIn, for fast, secure access without the need to remember yet another password!

It's also even easier to plot new devices on your maps. After initial placement, you can now drag them into the exact position required.

We're always delivering new functionality. However, you'll never experience downtime while we're working on upgrades, so you can enjoy peace of mind that your fire system data is accurate and accessible at all times.

To experience the changes, log in to your AdvancedLive account, or to find out more, visit **live.advancedco.com**, contact your sales representative or email **enquiries@advancedco.com**
